

ABSTRACT OF THE DISCLOSURE

An absorbent product includes a crotch portion, edges extending in the longitudinal direction and in a transverse direction, an upper, liquid-permeable surface layer, a lower, liquid-impermeable surface layer, an absorbent body arranged between the surface layers with liquid barriers extending in the longitudinal direction arranged essentially parallel to those edges of the product running in the longitudinal direction, the liquid barriers each having a free edge, side flaps extending in the longitudinal direction outside the liquid barriers and having parts of at least one of the surface layers, and elastic elements extending in the longitudinal direction and fastened to the liquid barriers or to the side flaps. The liquid barriers are in the region between their attachment to the absorbent product and their free edge, fixed to the adjacent side flap outside the edges of the absorbent body, providing double raised leakage barriers arranged along the edges extending in the longitudinal direction.
